

EA FMS – FINAL MODULES & FUNCTIONAL CONTENT

Final business-module structure, module scope, common engines and workflow

1. Final Architecture Decision

The final EA FMS business architecture contains eleven business modules. Intake, workflow, escalation, AI, automation, dashboards, audit and storage are supporting platform capabilities and are not counted as additional business modules.

2. Final Business Modules

No.	Business Module	Purpose
1	Director Daily Workspace	Primary daily operating screen for the Executive Assistant.
2	Calendar Management	Manages the Director/EA calendar and protects time.
3	Meeting Management	Manages the complete meeting preparation and post-meeting action cycle.
4	Action Item Tracker	Controls WHAT, WHO and WHEN from assignment through closure.
5	Decision Management	Records Director decisions and tracks implementation.
6	Communication Management	Controls internal, external and Director-related communications.
7	Travel & Hospitality	Manages travel, itinerary, logistics and hospitality requirements.
8	Approval Management	Controls requests requiring approval and their supporting records.
9	Follow-up & Escalation	Prevents open items from being forgotten and manages escalation.
10	Document & Records	Maintains controlled documents and confidential records.
11	Reports & Briefing Packs	Converts operational activity into management information and leadership-ready outputs.

1. Director Daily Workspace

Purpose: Primary daily operating screen for the Executive Assistant.

Functional content:

- Today's Calendar
- Tasks Due Today
- Open Actions
- Follow-ups
- Approvals Waiting
- Meeting Preparation
- Communications
- End-of-Day Summary

AI assistance:

- Prioritize today's work
- Surface urgent items
- Smart daily briefing
- Predict delays and risks

2. Calendar Management

Purpose: Manages the Director/EA calendar and protects time.

Functional content:

- Calendar Planning
- Meeting Scheduling
- Availability Check
- Conflict Detection
- Protected Focus Time

- Meeting Confirmations
- Links and Reminders

AI assistance:

- Suggest suitable time slots
- Detect conflicts
- Optimize schedule
- Smart reminders

3. Meeting Management

Purpose: Manages the complete meeting preparation and post-meeting action cycle.

Functional content:

- Agenda and Preparation
- Pre-Meeting Briefing
- Document Collection
- Attendance
- Minutes
- Decision Capture
- Action Item Creation
- Follow-up Dispatch

AI assistance:

- Prepare agenda drafts
- Generate briefing notes
- Draft minutes
- Extract decisions, owners and actions

4. Action Item Tracker

Purpose: Controls WHAT, WHO and WHEN from assignment through closure.

Functional content:

- Action definition (WHAT)
- Owner assignment (WHO)
- Due date (WHEN)
- Owner acknowledgement
- Progress updates
- Follow-up tracking
- Due-date management
- Escalation levels
- Closure and evidence

AI assistance:

- Suggest owners
- Predict due dates
- Detect delay risk
- Draft follow-ups

5. Decision Management

Purpose: Records Director decisions and tracks implementation.

Functional content:

- Decision recording

- Date and context
- People informed
- Related meeting
- Related actions
- Implementation status
- Decision history

AI assistance:

- Summarize decisions
- Link related records
- Detect incomplete implementation
- Generate decision-log summaries

6. Communication Management

Purpose: Controls internal, external and Director-related communications.

Functional content:

- Email
- WhatsApp / Calls
- Internal Communication
- Client Communication
- Letters / Correspondence
- Replies and Follow-ups
- Priority and Tags (Action / FYI / Decision Needed)
- Communication History

AI assistance:

- Classify urgency
- Summarize long threads
- Draft responses
- Improve tone
- Trigger follow-up alerts

7. Travel & Hospitality

Purpose: Manages travel, itinerary, logistics and hospitality requirements.

Functional content:

- Travel Requests
- Approvals
- Flight / Train Booking
- Hotel Booking
- Local Transport
- Hospitality
- Itinerary and Documents
- Expense Tracking

AI assistance:

- Suggest options
- Compare alternatives
- Create itinerary
- Travel checklist

8. Approval Management

Purpose: Controls requests requiring approval and their supporting records.

Functional content:

- Approval Request
- Supporting Documents
- Director Review
- Approved / Changes / Rejected
- Revision Handling
- Approval History

AI assistance:

- Check completeness
- Flag missing documents
- Recommend routing/approver
- Track status

9. Follow-up & Escalation

Purpose: Prevents open items from being forgotten and manages escalation.

Functional content:

- Follow-up Cycles
- Reminders
- Escalation Engine
- Level 1–5 Escalation
- Overdue Alerts
- Director Alerts
- Resolution Tracking

AI assistance:

- Draft follow-ups
- Suggest escalation level
- Predict resolution time
- Detect at-risk items

10. Document & Records

Purpose: Maintains controlled documents and confidential records.

Functional content:

- Document Storage
- Categorization
- Confidential Records
- Version Control
- Access Control
- Audit Trail

AI assistance:

- Auto-categorize
- Extract key information
- Detect duplicates
- Flag access risks

11. Reports & Briefing Packs

Purpose: Converts operational activity into management information and leadership-ready outputs.

Functional content:

- Daily Summary
- Weekly Review Pack
- Meeting Reports
- KPI Reports
- MIS Compilation
- Decision Summary
- Leadership Pack

AI assistance:

- Auto-compile reports
- Visual insights
- Highlight variances
- Trend analysis

3. Common EA Intake & Classification

This is the common entry layer. It receives business inputs and determines which business module should own the item.

- Capture requests from Director instructions, meetings, reports, escalation memos, client/developer requests, travel/hospitality requirements, approval requests, signed documents and recurring EA work.
- Identify source and category; classify urgency and priority.
- Decide the destination business module, automatically or manually.
- Create a unique record; set owner and due date.
- Validate whether the request is understandable and whether required information is available.
- Maintain source, title, description, business purpose, expected result, required date and attachments.

4. Common Workflow Engine

All business modules use one common lifecycle. The workflow engine controls status, ownership, dates, review, revision, completion and history.

Stage	Meaning
Captured	Request/task is created.
Information Checked	Details, attachments, priority and due date are checked.
Planned	Work is placed into the relevant plan/calendar/task queue.
In Progress	EA or assigned owner starts execution.
Waiting / Follow-up	System records dependency, response owner and next follow-up.
Submitted	Output or update is submitted.
Review	Director/EA reviews where required.
Revision / Rework	Returned work receives revision tracking and is resubmitted.
Completed	Work is accepted and closed.
Archived	Closed record remains available as history.
Analytics	Operational data feeds dashboards, KPIs and insights.

Waiting / Follow-up records who must respond, what is required, when it was sent, expected response date, last follow-up, next follow-up and remarks. Returned work keeps revision number/date and returns to the same record until accepted.

5. Follow-up & Escalation Engine

Escalation is a shared capability used by the Follow-up & Escalation module and other time-sensitive workflows.

Level	Type	Rule
Level 1	Reminder	EA reminds the owner when action is overdue.
Level 2	Escalation	Overdue work is escalated to the relevant Department Head.
Level 3	Director Alert	High-priority or materially overdue work is brought to the Director.
Level 4	Urgent	Director decision/intervention is required.
Level 5	Critical	Confidential, legal, client or emergency matter requires immediate escalation.

6. AI Assistance Layer

AI is embedded into the work and supports the EA; it is not a separate chatbot/business module.

- Intake: suggest module, priority, due date, people involved and checklist.
- Daily planning: prepare a briefing from calendar, urgent actions, approvals, overdue work and schedule risks.
- Meetings: prepare agendas/briefing notes, draft minutes, identify decisions, owners and deadlines.
- Communication: classify urgency, summarize threads and prepare drafts for review.
- Decisions: summarize decisions, connect related records and identify incomplete implementation.
- Follow-up: draft messages, suggest escalation and identify repeated delays or overloaded owners.
- Revision: summarize reviewer remarks, compare versions and suggest corrections.
- Reporting: generate insights on delays, bottlenecks, workload risks and trends.

7. Automation, Notifications, Audit & Storage

Automation

- Recurring operating work
- Status updates
- Due-date monitoring
- Delay-level calculation
- Report preparation

Notifications & Reminders

- Due-date reminders
- Follow-up reminders
- Approval reminders
- Meeting reminders
- Escalation alerts
- Director alerts

Audit & History

- Timestamped actions
- Status history
- Revision history
- Approval history
- Escalation history
- Access/activity records

Document/File Storage

- Actual documents/images/files stored in DigitalOcean Spaces
- MySQL stores file metadata, object key, record relationship and access information

8. Dashboards & Views

These are presentation/analytics views over the business modules, not additional business modules.

- EA Daily Workspace
- Director Dashboard
- Meeting Dashboard
- Action Tracker Dashboard
- Decision Log Dashboard
- KPI & Performance Dashboard
- OKR & Growth Dashboard

9. Main Outputs

- Daily Task Summary
- Weekly Director Pack
- Meeting Follow-up Report
- Decision Log
- Action Closure Report
- Performance Dashboard
- MIS Compilation
- Decision Summary
- Leadership Pack

10. Final Module Count

Official EA FMS Business Modules: 11

1. Director Daily Workspace
2. Calendar Management
3. Meeting Management
4. Action Item Tracker
5. Decision Management
6. Communication Management
7. Travel & Hospitality
8. Approval Management
9. Follow-up & Escalation
10. Document & Records
11. Reports & Briefing Packs

Supporting architecture: Intake & Classification, Common Workflow, Escalation, AI Assistance, Automation, Notifications, Audit/History, File Storage, Search/Relationships and Administration.

11. Technology Implementation Mapping

- Angular: feature areas/pages for the eleven business modules plus shared UI components.
- .NET: domain/application services, APIs, workflow rules, escalation jobs, notifications, AI orchestration and audit services.
- MySQL: structured business records, relationships, workflow history, revisions, permissions, metadata and audit data.
- DigitalOcean Spaces: actual images/documents/files; MySQL keeps metadata and object references.
